

Portable 20 Gallon Liberty LC Foamer

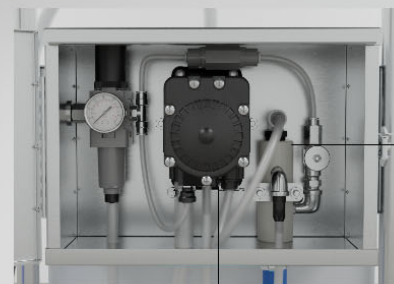

Model #941387

20-Gallon Water Tank

Unlike typical air pump foamers that require pre-diluted (ready-to-use) chemical, the Liberty LC Foamer dilutes chemical on-demand using water stored in the 20-gallon tank.

Stainless Steel Cart

The heavy-duty stainless steel cart includes a lockable pump enclosure and a jug rack for chemical concentrate.

Foamer Body

The venturi foamer body uses water pressure to draw chemical concentrate into the water stream. It also injects compressed air into the chemical solution.

Air Pump

A cost-effective Flojet AODD pump draws water from the 20-gallon tank and creates pressure for the venturi foamer body to dilute chemical concentrate.

The water flow is regulated to match the mid-range of the air pump's specified operating range, which protects the pump from running at maximum capacity and extends pump life.

Chemical Concentrate

This system dilutes concentrated chemical directly from any 1-gallon container. It is easy to refill or switch products by swapping containers of chemical concentrate.

Solid Rubber Tires

Non-marking, solid rubber tires resist abuse and chemical exposure. The front wheels feature stainless steel swivel casters.
