ABOUT OUR PROCESS

- Fogging is a great way to disinfect many touch points quickly (floors, soft surfaces, mats, etc) that normally do not get wiped down
- Important to remember that this is about your long term cleaning protocol...not a magic bullet!
- ATP testing (measured in RLU's) is done to detect the amount of organic matter that remains after cleaning a surface
- RLU under 60 is generally considered food-grade sanitary...under 100 is a reasonable target for an office
- We used a food safe, hospital grade disinfectant with a 10 minute dwell time to kill most bacteria and virus
- We used 6 gallons of chemical product, or the equivalent of 24 spray bottles!
- We use the same process for the office and sampled several high touch points to evaluate success of the entire service.

RESULTS

- We fogged the facility (to kill microbes) then wiped high touch surfaces to ensure disinfection.
- Average after cleaning RLU was 32! This is surgical instrument clean!
- Always remember to hit tops, bottoms, sides for chairs, door handles, buttons, etc...especially in the kitchen!

Comparison to prior service	May 1	May 1	BEFORE	Jan 15	Jan 15	Notes
	Before	AFTER	CHANGE	BEFORE	AFTER	
forklift 15 steering wheel	2285	103	19%	2709	43	Focus cleaning efforts here
warehouse office door left	1103	55	-50%	548	11	Focus cleaning efforts here
conf phone and desk	186	49	55%	288	56	
close to office leg press handles	234	52	-39%	142	18	
Wayne desk and drawer handle	424	173	29%	548	38	
top stair left railing	655	98	-30%	460	57	
kitchen table	222	13	8%	240	10	
fridge door handle	117	73	132%	272	19	
Averages	653	77	0%	651	32	

Recommendations

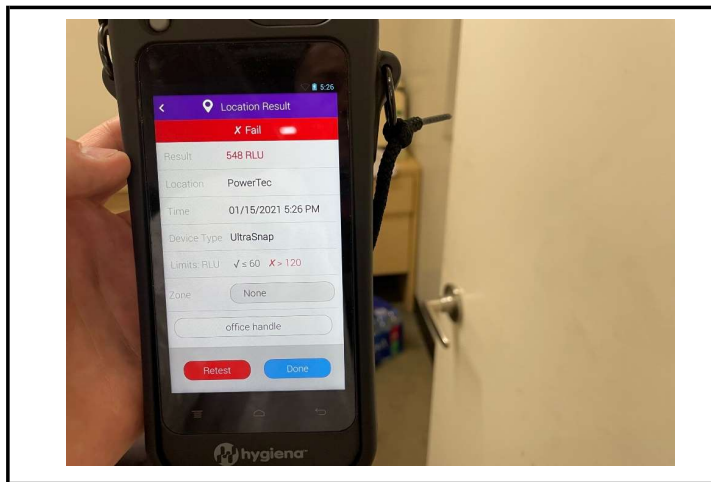

1 - Make sure to spend time reinforcing to staff to clean regularly. Especially in the warehouse, using a commercial grade disinfectant regularly will help ensure that high touch surfaces like steering wheels, door handles, etc remain clean over time.

2 - We applaud you for adding a layer of Shield! This will help keep your surfaces clean for up to 90 days. All surfaces are now actively killing microbes + ongoing cleaning practices will be more effective. We recommend starting a regular treatment every 60-90 days to maintain your newly disinfected surfaces!

Thanks for letting us serve you and please pass along the word to any other offices, gyms, restaurants, hotels, etc looking for a similar result!
